BALLISTIC GRADE VEHICLE PROTECTION

Professional Quality Products

ASFIR'S variety of products is the perfect solution for accessorizing your off road vehicle

Winch Bumpers

The innovative Winch Bumper is designed and developed to replace the original factory bumper for concealed winch mounting. The bumper covers the winch, but is not attached to it. It has multiple openings to allow airflow and enables easy access for winch maintenance. All of our bumpers are light in weight, high in strength and keep close to the vehicle's original contour lines

Skid Plates

Quality skid plates for off road vehicles with the highest design, performance and finish standards in the world. Asfir offers various skid plates protecting the vital components under the vehicle. The skid plates are made from quality aluminum and steel, bolted to original holes in the vehicles. Service openings allow servicing of the vehicle without removing the plates.

Side Protectors

Protect the lower side of the vehicle and aid recovery with a Hi-Lift Style jack. Designed by Asfir's Research & Development team and manufactured using the most up-to-date technology. The side protectors are made of quality steel combined with aluminum side steps
